

Brief: Process Porn Assignment

Processes & Design Theory

Profs: Sina Sohrab

Objective

The goal of this assignment is to develop a *methodology of one's own*, through exploring and celebrating the *process* of creation, rather than the final product. Design is not about following a formula; instead, it thrives on *ways of operating* that are fluid and often non-replicable. *Process Porn* invites you to embrace the joy of making for its own sake.

Concept

Think of *design as play*: a series of explorations, experiments, and iterations. Like candy, which you enjoy not because it nourishes you, but because it gives you an immediate satisfaction, this project challenges you to let go of the pressure to create a (polished) final product, and instead dive deeply into the messiness, curiosity, and discovery that come with creative work.

Guidelines

1. **Document the Journey**
 - Keep a record of each step in your design process. This could be through photos, videos, sketches, or written reflections.
 - Focus on the methods and experiments you try along the way.
2. **Experiment with Tools and Materials**
 - Explore unconventional materials or tools.
 - Play with techniques or approaches you've never used before.
3. **Forget the Outcome**
 - Shift your mindset from result-driven creation to process-driven exploration.
 - Allow yourself to make mistakes and see where they lead you.
4. **Develop Your Own Methodology**
 - Use this project to uncover the design practices that resonate with you and support the type of design you want to pursue.

Inspiration: Structure of Play (adapted from D. Morris)

- *Exploration*: Begin with curiosity and experimentation.
- *Imitation*: Observe and repeat techniques you find intriguing.
- *Innovation*: Add your own creative twists and expressions.
- *Representation*: Introduce symbols, stories, or narratives.
- *Competition*: Challenge yourself by setting goals or rules.
- *Refinement*: Practice and refine your methods, aiming for mastery.

Outcome

A reflective presentation of your journey—your experiments, mistakes, breakthroughs, and moments of discovery. This documentation will form a *methodology of one's own*, highlighting the unique ways you operate –and think about– design.

Key Takeaway

This project is about you discovering the freedom and creativity in the process of making. Celebrate your methods, embrace the unexpected, and find joy in the act of creation.

Assessment rubric

The process-projects will be assessed in two moments, midterms and finals, with the first being a formative assessment (solely qualitative) and the latter including a quantitative component. The criteria for evaluation are:

- **Process (70%):** 1 deliverable each of the 10 weeks of the project (to be submitted in BB)
- **Result (30%):** evidencing the decision-making of the experimentation process you conducted throughout the term (what did you do, starting from what point and arriving where?) & critically reflecting on your own process (why did you do the things you do in the way that you do them?).

The grade of the **Result** portion will be itself split into an assessment by the professors (80%) and a self-assessment (20%).
