

your PAL

Meet **Your PAL**, the revolutionary productivity boost for students! This **AI-driven personal assistant** transcends traditional task management, becoming your dedicated study companion. Your PAL learns your unique work habits; pinpoints peak productivity hours, and tailors bespoke schedules for optimal efficiency. With seamless assignment management, it goes beyond academics to measure your wellness, offering comprehensive insights into daily work patterns. Elevate your academic journey with Your PAL, the ultimate tool for **personalised productivity** and **holistic success** in your student life!

Target audience

Your PAL is designed for university students aged 18-25 with a hectic and intense schedule who often feel overwhelmed, pressed for time, and struggling to find balance. Tailored for those yearning to excel at work, boost productivity, attain mental peace, establish a healthy routine, and bring order to chaos, Your PAL understands the challenges you face. This AI-powered assistant isn't just a scheduler; it's your ally in reclaiming time for yourself, helping you achieve academic success while fostering a harmonious equilibrium between work and personal life.

What does our app measure? How?

Your PAL goes beyond ordinary task management, leveraging background data to offer an unparalleled understanding of your work patterns. Tracking when and how you work captures detailed insights into your productivity. The analytics section unveils graphical representations of your task distribution, illustrating time spent on various activities. Wellness insights provide a comprehensive overview of your daily workload and identify trends in your productivity. This rich dataset fuels Your PAL's continuous learning, enhancing task recommendations and schedule optimisation.

Process

The development of the YourPal app began with an initial concept phase, where we, as a group of students, identified a common challenge: the need for better time management and wellness support among university students. This idea built the foundation of our project, leading us to create a digital solution in the form of a productivity app.

Research and Conceptualisation:

Our journey started with research. We conducted surveys within our university to understand students' specific needs and challenges, in addition to extensive research on productivity apps and their competitors. This helped us understand the valuable features of the existing apps and position ourselves, developing an idea of an app that reimaged traditional time management and collaboration apps. This way, our app's value proposition consists of its

core functionalities: an AI chatbot for task management, a personal and team task management section, and a wellness analytics feature.

Competitors:

Design and Prototyping:

Once we had a clear vision, we moved into the design phase. Utilising Figma, we created detailed wireframes and mockups of the app. We focused on user interface (UI) design, ensuring the interface was intuitive and user-friendly. Although our process of working together as a team was slow at first, we could focus when it mattered and were strong in dividing the work into teams.

First iteration:

Second iteration:

Third iteration:

Final iteration:

Creating Animations and Interactivity:

A key aspect of our project was to make our Figma prototype as interactive as possible. We learned and applied features known in the workshop to create animations and simulate the app's functionality. This included animating the chatbot interactions, task management flows, and visualising wellness analytics.

Final Deliverable - Screen Recording for App Video:

For our final deliverable, we created a screen recording of our fully animated Figma file showcasing the app's functionality. This video served as a demonstration of how YourPal would function in a real-world scenario. It highlighted the flow between different features, the ease of interacting with the AI chatbot, and the informative nature of the wellness analytics.

Final Deliverable - Interview for App Video:

We also chose interview questions to create the interview section at the beginning of our app video. We asked three friends from other degrees to film their interviews so we could demonstrate some of the common problems students face working in teams and managing their lives at university.

Final Deliverable - App Video:
